

TourSolver

The route optimization solution in the cloud

TourSolver Cloud is a web-based route optimization solution which enables logisticians, planners and all mobile resources a simple means of defining optimal route plans. Delivery drivers, technicians and sales forces spend less time on the road, and more time with satisfied customers.

TourSolver is THE 100% cloud optimization solution, easy-to-use, profitable and suited to all businesses and fleet sizes.

Easy to use

Thanks to its user-friendly interface and its integrated online help, TourSolver is available for immediate use and do not require any training. The user is guided step-by-step through each optimization stage and the overall configuration is recorded when first going online.

100 % cloud

No installation, automatic updates and secured data: TourSolver is a ready-to-use SaaS solution! Never before has route optimization been so accessible, simple, quick and efficient...

Business oriented

Visits, calls, deliveries, pick-ups... the solution adapts to the user's business. Depending on the defined activity (logistical, technical, commercial) the constraints taken into consideration are automatically tailored to business specifics (e.g.: vehicle capacity for delivery staff, skills for the technicians...).

Profitable

Reducing as it does distance and travel time, TourSolver Cloud enables you quickly to score some major wins : 15% reduction in mileage and associated costs, greater productivity, better customer service, lower CO₂ emissions...

Define relevant, realistic and profitable routes in 4 steps!

Never before has route optimization been so accessible, simple, quick and efficient.

www.toursolver.com

1 Configuring the activity

Customizing the interface, configuring the terminology, selecting the appropriated vehicle type, defining the features of the depots...

customization on first login

2 Defining the resources

Creating teams with common parameters and specific characteristics (departure/arrival point, working hours, allocation, e-mail...).

automatic location of the teams

3 Importing and geocoding customers

Importing data using drag-and-drop, mapping wizard, taking into account numerous constraints, location of visits, geocoding statistics, interactive treatment of incorrect or incomplete addresses...

taking into account of numerous constraints: loading time, availabilities, delay penalty...

4 Optimizing routes

Multi-routes plan, history of simulations, savings simulator, auto-diagnose, presentation of optimized routes (list, Gantt, map), modifying a routes plan manually, several export formats (Excel, PDF, iCal, etc)...

optimized routes for several resources over several days
